KEY SKILLS

- Java • Spring • Microservices • Product Development • CI/CD
- AWS • Agile • SOAP/REST • Backend • Mentoring • Jenkins • Problem Solving

PROFESSIONAL EXPERIENCE

Software Developer

Quest Global - On-Call Scheduling

June 2019 to Present
Bangalore, India

Java developer working with spring in a Micro service architecture running on AWS.

Roles and Responsibilities

- Full stack developer with primary role of application development and team collaboration.
- Involvement in Agile scrum meetings - daily stand-ups, backlog refinement, sprint planning and retrospective.
- Active interaction with client for requirement gathering & analysis and upcoming plans.
- Collaboration with offshore and support teams.

Java Developer

Sonata Software

June 2017 to April 2019
Bangalore, India

The main objective in implementing a customer field scheduling solution is to enable customers to schedule specific time slots for service. It will enhance the capabilities to manage field service through online self-service and technical support channels.

Responsibilities

- Develop technical designs for application development.
- Finding new tool and technologies and doing proof of concept for those.
- Introduced i18n Internationalization and theme concepts.

Software Engineer

Capgemini-Innovation

January 2012- May 2017
Bangalore, India

Innovation team, responsible for planning, invent, reinvent and test. I helped to define and build changes to new/existing platforms and deep understanding of customers, cross-category insights and an integration of capabilities. Big thinking and execution at the same table, integrated tools within the same strategic process.

Roles and Responsibilities

- Server Management.
- Writing Backing Beans Classes, Navigation Rules.
- Developed application using spring boot and RESTful API's.

Full stack Java EE developer for developing user interface and business logic of a web application for the Aerospace business that allowed predictability of the supply.

Roles and Responsibilities

- Application development using Java.
- Involved in Core product development - Server-side coding.
- Troubleshooting client and server-side issues.
- Create RESTful services, business logic (Services) and do CRUD tasks.
